itelligence

it.manufacturing increases your competitiveness and planning reliability

Success through optimized order processing, increased flexibility and planning reliability, more efficient processes and better productivity.

»With it.manufacturing, a fully integrated comprehensive SAP ERP solution is available for the manufacturing industry. Based on customer requests regarding development, planning, procurement, manufacturing and delivery, the entire value added chain is mapped in an integrated ERP solution.«

itelligence AG, Bielefeld, Germany

Requirements are continuously increasing with respect to integrating all activities and all parties involved within the value added chain. Increased competition brings about considerable cost pressure; order fluctuations require additional flexibility. Cost pressure often forces the outsourcing of production abroad. Thus, it is important to be able to react in a flexible manner with respect to the customer, and at the same time, achieve standardization of products and processes. From these requirements, the necessity for efficient management and monitoring of the logistics chain becomes particularly important.

from itelligence, combines these aspects and extends them with functions from Product Life-cycle Management (PLM), Customer Relationship Management (CRM), Supply Chain Management (SCM) and Business Intelligence (BI). The system therefore forms the technological platform for continuous information processing within the entire value added chain.

Everything is set for the future. Process-optimized workflow without interruptions.

Manufacturers and suppliers can only meet these requirements with a high-performance, reliable and innovative software solution. The tried and tested SAP industry solution, it.manufacturing

**Together, we can master
your industry requirements.
it.manufacturing supports you:**

- with the efficient development of individually-tailored customer solutions as well as standardization
- in manufacturing high-quality products in spite of increasing cost pressures
- with quality management of all logistical processes
- in increasing your capability and reliability to deliver
- with optimal planning of resources and capacities
- with a comprehensive overview of current costs, revenues, resources and customers
- with a transparent mapping of your logistical processes, both within your company and beyond
- with the administration of your cross-company processes
- with the automatic integration of logistics in accounting and bookkeeping
- in your international presence, e.g. with the mapping of complex foreign trade specifications

Communication has become the most important commodity for manufacturing.

In order to remain competitive, one must be persuasive with efficient, continuous business processes

With our highly-technical and economic expertise in the manufacturing industry, which is reflected in the functionality of it.manufacturing, we are able to cover industry-specific requirements with minimal effort required for implementation. This allows us to dedicate more time to solving customer-specific requirements.

Our solution provides comprehensive default settings and documentation in order to fulfill your requirements for an optimized and speedy implementation.

This includes:

- a complete, immediately deployable system
- preset parameters and tables
- a clear implementation methodology, extensive and comprehensible
- business scenarios with master data and movement data, directly executable processes in project activities
- detailed project and user documentation
- user roles for the key workplace descriptions
- Data sheets and proposals for the transfer of data
- test guides for customer-specific function and integration tests
- forms (order confirmation, invoice, etc.) that can be adapted to customer-specific requirements

From administration of interested parties and activities on up to opportunity management, the activities in the pre-sales phase can be effectively

controlled and monitored. In quotation processing, products are calculated or comprehensively described by means of a variant configuration. With it.manufacturing, practical sales and shipping processes are available, with which you can process orders without delays, thus increasing customer satisfaction. By means of the integrated PLM functionality, you are provided with comprehensive product data and change management in addition to extensive documentation administration, classification functions and standard integration of CAD systems.

»With it.manufacturing, you can reliably plan and control your production processes!«

The efficient interaction of manufacturing and procurement guarantees a smooth flow of materials to the point of delivery. Integrated quality management ensures an optimized quality level, both in goods receiving as well as in production, leading to the lowest product failure rates. Quality assurance, order tracking and supplier evaluation reduce the percentage of delayed and defective deliveries. Interactive detailed planning and disposition with simulation capabilities assist in achieving an increase in delivery reliability by means of finite planning, a reduction of manual planning effort, increased transparency with respect to defective parts and an increased quality of the promise to deliver. Convenient, finite capacity planning in the short and medium term is possible. The accounting system and a powerful information system ensure that data can be quickly accessed at any time, from any location. Costs are kept in line at all times by means of integrated controlling. Economic assessments and important key figures of the company can be called up in real-time.

Our experience shows that every industry has its own specific IT requirements, owing to their different processes. This is why at itelligence, IT and industry specialists work in close collaboration to produce your solution.

itelligence SAP Business All-in-One industry solutions are preconfigured for the typical business processes of a specific industry, thus enabling costs and implementation times, in particular, to be radically reduced. Other benefits include almost unlimited scalability and a high level of flexibility, as well as increased productivity and cost control.

SAP-certified industry solutions:

- it.automotive
- it.chemicals
- it.hightronics
- it.metal
- it.trade
- it.cast
- it.consumer
- it.manufacturing
- it.service
- it.wood
